

# Corn

- Most common grain used for feed in the US
- Starch-based energy supplement
  - May decrease forage digestibility when fed with hay
- Very digestible and highly palatable
- Low in protein and high in energy, may require additional protein supplementation for growing cattle diets
- Cracking or rolling vs. fed whole will increase the digestibility

On average:  
88% dry matter  
90% TDN  
9% crude protein  
0.02% calcium  
0.30% phosphorous
