

# Peanut hulls

## (whole, ground, or pelleted)

- High in fiber, low in energy
- Moderate protein value
- Bulky, may be difficult to handle
- Used as hay-replacer/extender in beef cattle diets
- Note: Finely ground or pelleted hulls → grinding decreases effective fiber and may lead to negative health effects – *it is not recommended to feed finely ground peanut hulls*; limit pelleted peanut hulls to 40% of total dry matter intake per day for this reason as well

On average:  
85% dry matter  
22% TDN  
7% CP
