

Wheat middlings

- Good energy and protein source
- High in phosphorus and low in calcium
- Available in pellets or loose meal
- Can't store pelleted in hot, humid conditions – will soften and fall apart

Feeding Considerations

- Limit to 50% or less of total daily dry matter requirement
- Use in combination with other feeds to avoid the risk of founder or bloat

On average:
90% dry matter
83% TDN
18% CP
0.15% calcium
1.00% phosphorous
