

Auxin Herbicide Best Management Practices

In January, the Alabama Department of Agriculture and Industries submitted 24(c) labeling for all products containing 2,4-D or dicamba intended to be used in conjunction with 2,4-D or dicamba tolerant crops. The 24(c) label requires specific mandatory training and wind speed restrictions not to exceed 10 miles per hour.

This training is intended to assist applicators with reducing incidents of herbicide drift to susceptible crops, technical application methods, tank cleanout, and information about the new chemistries. The producer, certified applicator or person responsible for the application of these products on cotton and soybeans in crop must receive this training.

Commercial applicators will receive pesticide recertification credit upon completion. Certified crop advisors will also receive points. Lunch or dinner will be provided at each location. To register, go to www.aces.edu/go/707. Cost is \$10.
